- Next.js
- React.js
- Node.js
- Express.js
- Javascript
- MongoDB
- Tailwind CSS
- Firebase
- Next Auth
- Zod
- Redux
- HTML
- CSS

PROJECTS

INDUSTRADZ PLATFORM

Developed an industrial services platform featuring three user roles: customers, sellers, and administrators. Sellers register as businesses, purchase subscriptions, and list services such as maintenance, electrical, machine sales, spare parts, and raw materials. Users can find services based on location, book appointments, and interact with sellers. The platform manages bookings, payments, and commissions. Admins oversee service approvals, customer support, and the overall platform operation.

LK SOCIAL ECOMMERCE PLATFORM

Developed LK Social, a comprehensive social media platform for buying and selling clothing items. Implemented user authentication with Clerk, post management, and email notifications using Nodemailer. Leveraged Express.js and MongoDB for the backend, ensuring seamless user experiences across devices with responsive design. Integrated payment processing through Stripe for secure transactions.

EMPLOYEE MANAGEMENT SYSTEM

Developed an Employee Management System (EMS) for companies renting employees to clients, featuring drag-and-drop employee-client management, detailed profiles, and assignment tracking. The system enhances visibility, streamlines operations, and optimizes time management.
